

# Standard Ghost Hunting Kit

Each kit is contained in 2 aluminum hardcases with DIY foam & egg foam layers and includes the following:

## 4-in-1 Multifunction Environment Meter with Sound Level:

The 4-in-1 multifunction environment meter capable of measuring sound levels, light, humidity, and temperature. It includes a K-type temperature probe to measure temperature, a detachable sensor to measure light, and a built-in microphone to measure sound. Just as essential as a regular EMF reader as it can monitor a constant measurement of ambient room conditions and quickly gauge fluctuations. A 9-Volt battery is required for operation.

Requires the *Sensory Equipment* or *Parapsychology* skill to use.

**EMF Meter:** Detects 3 types of electromagnetic radiation, including magnetic field strength, electric field, and radio frequency (RF) field strength in a single unit. Offers a continuous sampling digital readout, omni-directional electric and magnetic sensitivity and two separate scales for magnetic field readings. Designed to measure electromagnetic pollution to find poorly grounded wiring and leaks in microwave oven doors, dimmer switches, cellular phones, FM transmitters, automobiles, TV's and PC's and other electronics. This device allows the user to establish unusual fluctuations in electrical fields as well as quickly discounting any strange readings by running it along the walls during a baseline investigation to establish sources of power (plugs, sockets, etc.) and any ongoing power fluctuations and leaks. A 9-Volt battery is required for operation.

Requires the *Sensory Equipment* or *Parapsychology* skill to use.

**16GB Digital Voice Recorder:** Has 16GB of internal memory to record 1160 hours of audio.

Features include playback via built-in speaker, 1536kpbs HD Recording Quality, voice activated recording, cross-platform recording at MP3/WAV for simple downloading and charging via USB cable to a computer, smartphone, MP3 player, etc. for easy playback, new *Optimized Menu Choice* function for more intuitive navigating, and easy file management. Can be used for collecting EVP's as well as for placing in a strategic spot to record any incorporeal sounds or voices in the area.

Note: Malfunctions at times while passing through cold spots or areas with high electromagnetic fields (common effect of paranormal activity).

**HD Video Recording Handycam:** Offers flexibility and professional quality HD Video with face recognition, voice enhancement & noise reduction, optical *SteadyShot* image stabilization, and a built-in USB cable for easy MP4 codec file transferring and charging. Other features include a built-in Dolby Digital 5.1-channel microphone, 2.7-inch widescreen hybrid touch-panel, and *Super NightShot Plus* Infrared System (which uses a slow shutter mode to shoot video with improved color and contrast, even in total darkness. Note: Malfunctions at times while passing through cold spots or areas with high electromagnetic fields (common effect of paranormal activity).

**Handheld Infrared Thermal Imaging camera and Thermometer:** This device offers high resolution imagery to see the full range of infrared imagery, 5 different color pallets to choose from (rainbow, iron red, cold color, black and white or white and black), 3 GB built-in memory for hours of recordings, all while being lightweight and comfortable. While intended for use in home inspections, fire-fighting, archaeology, traffic, farming, locating electronic manufacturing fields or any job that requires accurate temperature readings, thermal imagers have become common place during paranormal investigations for finding cold spots, temperature anomalies and other paranormal activity, has even recorded entities in their natural form from time to time. Requires the *Sensory Equipment* or *Parapsychology* skill to use.

**Wireless compact portable photo printer:** Prints instantly dry, water resistant photos on demand. Can be connected to a smartphone, a tablet, memory card or via USB cord. Included a battery pack, loads 18 photo sheets (or sticker paper) at a time, LCD screen to select and edit the images to print beforehand. Good print resolution with up to 16.8 million colors. Ideal during paranormal investigations when desiring to take and compare before and after photos, noted photography evidence, or to add investigative team member pictures to files being created on-site.

**7100 Lumen Handheld Tactical Flashlight:** Features a superbright P70 LED bulb (lights up a whole foot field easily) and delivers a powerful beam and high-definition vision (brighter than most car headlights), 5 brightness levels (high, medium, low, strobe, SOS), incredibly durable & sturdy (can take 18 direct points of damage before breaking) with a lotus top to protect the lens & rhombus-skid proof coating and waterproof for use in rain, snow or emergency situations. Can be used to attempt to blind (or at least partially blind) opponents in darkness or in poor lighting situations.

## Other noteworthy items while ghost hunting;

**Digital watch:** Should include a stopwatch feature. Used to record the time and length of a particular paranormal phenomenon or EVP recording session, etc. in notebook or voice recorder,

**Notebook and Pen:** Used for taking notes, sketching maps of locations being investigated, record observations & data and jotting down any random thoughts or feelings while investigating.

**Compass:** Used to provide an orientation of the surrounds, helpful when jotting maps and helps keep user from getting lost outdoors. Can also serve as a “spirit detector” in a pinch as entities have been known to interfere with magnetic sources. The needle might go haywire and constantly spins, stops working altogether, or could point at a moving source (such as a spirit or entity).

**Ziploc bag of flour and baking soda:** Used to prevent tampering of the area being investigated as well as the equipment being used in the investigation. Typically sprinkled at the base of equipment out to a four or five-foot distance around it. Sprinkling powder in a secure area that has suspected paranormal activity can also be used as a method of observing paranormal activity.

**-Spool of black thread & scotch tape:** Another tool to determine that the equipment used during an investigation is not tampered with. Tape or tie thread around the area of the placed equipment; if the thread or tape is disturbed, it’s more than likely that the equipment or the area was tampered with. Tampered with equipment could be the result of paranormal activity or evidence tampering.
